

TYLÖ® Mega-Sauna heaters

For professional use

Mega is a new family of sauna heaters that combine the traditional pleasures of sauna bathing with clean, contemporary lines. One of the heaters' distinguishing features is the capacious stone compartment that provides optimum conditions for prolonged water vaporisation.

Mega heaters also incorporate the special "Air Flow System" – a unique construction that balances the heat and air supply to ensure that the water vaporisation process feels extra gentle and relaxing.

Mega heaters for professional use are available with outputs from 10 to 22 kW, as floor models and with a separate control panel. All models are made more or less entirely from stainless steel, and incorporate heating elements and other components of the finest quality.

That helps to ensure long life and dependability, which in turn makes these heaters ideally suited for use in public bathing facilities.

Tylö - sauna heaters – technically speaking.

A word of advice: Always choose the highest recommended output in relation to the volume of the sauna. This is especially important in log saunas and saunas with glazed wall sections. The greater the heat output in relation to the size of the sauna room, the lower the overall energy consumption.

For example: in a sauna room with a volume of 4 cubic metres, a 6.6 kW heater is a better choice than a 4.5 kW heater.

Sauna heater	Output kW	Sauna volume (cu.m.)	Minimum gap to side wall (mm)	Minimum height to ceiling in sauna (mm)	Suitable control panel and relay box	Distance floor – heater (mm)	Weight without stones kg	Weight of stones kg	Sizes in mm width x depth x height
EP 100	10	10 – 17	80	1900	TS 16, CC + RB 30	-	11	25	360 x 420 x 650
EH 150	15	14 – 34	100	2300	TS 30, CC + RB 30	-	25	45	480 x 540 x 780
EZ 225	22	22 – 45	100	2300	TS 58, CC + RB 60	-	27	55	560 x 550 x 900
